

BILLING ADMINISTRATION

R&D has designed a billing module that integrates with our routing software to generate transportation cost reports.

With the use of the billing administration module, R&D can trend service costs, prevent over-billing, and examine viable options that can improve efficiencies and reduce costs.

The R&D billing module allows customization to ensure it addresses the specific needs of the customer. It can support multiple forms of transportation vendor contracts.

As an added benefit to our customers we can expand our service to offer monthly reports that capture data such as ride times and cost per day. Information captured by the reports can assist in identifying growth trends within the transportation system.

This system of billing delivers cost-savings to our customers, allowing them to tap in to a revenue stream that was not available before applying these checks and balances – a great benefit to our customers.
