

ROUTING LOGISTICS

Using a combination of computerized routing and planning technology along with innovative transportation management techniques, R&D is able to create customized transportation systems for their customers.

As specified by the individual needs and goals of the customer R&D creates transportation routing strategies that can contain or decrease transportation costs while enhancing safety and service quality.

R&D has a proven record of developing innovative solutions to address challenging transportation issues. We can provide cost analysis of the current system, bell time analysis, and complete route reviews to insure a safe and efficient route design.

We provide information and make recommendations to our customers so they make well-informed decisions in regards to their transportation issues.

R&D consistently reviews routing technologies to ensure that we use the most current product available, and that it is capable of adapting to area specific service requirements and objectives allowing us to offer you the best.
